Industry Leaders and Trapeze Experts, Janet Davis and Christopher Bryan, Join Veolia Transportation

Silver Spring, MD – Vice Chairman and Chief Executive Officer Mark Joseph recently announced that Janet Davis and Christopher Bryan have joined Veolia Transportation's senior management team.

Ms. Davis was named Vice President of a new department entitled Business Improvement, which is focused on enhancing the company's strategic software applications. Mr. Bryan reports to Ms. Davis as Director of Business Improvement Applications.

This impressive team will review existing company technologies and make recommendations on how applications can be strengthened to improve operational performance. For all key software applications that drive performance, from safety to maintenance to HRIS, they will build the company's capabilities and provide direct support and solutions to contract locations, both transit and paratransit.

Ms. Davis and Mr. Bryan have a long team history of building best practices through astute design and implementation of software applications that enhance operational performance. They are also expert at extracting data from multiple legacy data environments to provide timely reports and "dashboards" to senior management.

"Janet's experience in transit and her knowledge of Trapeze make her a very valuable asset in helping our locations to increase performance." said Joseph. "We look forward to the expertise and innovation this team brings, to advance the service we provide to each operation. Along with her other duties, she will oversee a team of industry experts who will ensure that our locations fully meet or exceed all the contractual requirements."

Davis started her transportation career at the City of Glendale, AZ overseeing Fixed Route, Paratransit and Airport services. Early in her career, she contracted with On-Line Data Products to produce scheduling software for the paratransit operation. That collaborative effort began the PASS product legacy, which later was merged into the Trapeze suite of products. She went on to provide consulting to Transit properties worldwide, and also spent 10 years in the software industry.

Prior to joining Veolia, Davis' most recent position was Executive Vice President for MV Transportation, following the purchase of her company by MV. Her responsibilities there included oversight of operational IT functions, assistance with capital start-up for new contract bids, client communication oversight, and contractual compliance.

Ms. Davis' credits include 10 years with Trapeze, international consulting with over 300 locations around the world and in-depth experience in paratransit.

Mr. Bryan began his career in transportation at Capitol Metro in Austin, Texas where he was involved with the implementation of new technologies including PASS Paratransit scheduling software. He went on to work for Trapeze as the Director of Development involved in the design, implementation and use of the Trapeze suite of products throughout the World. Before joining Veolia he worked for MV Transportation as Director of IT.

About Veolia Transportation

Veolia Transportation is the leading private provider of multi-modal passenger transportation services in North America, operating bus, rail, taxi, shuttle and paratransit systems in over 130 locations in the US and Canada. The company operates many leading U.S. transit contracts including Las Vegas, Phoenix, Denver and San Diego.

Veolia Transportation entered the North American market in 2001 and has quickly expanded to a national presence, with over 16,000 employees and 150 contracts. Veolia Transportation has built its reputation on superior performance, long-term partnerships with transit agencies, and care for passengers and employees.

Veolia also owns SuperShuttle, America's leading airport shuttle service, moving over 8 million passengers per year to and from the airport, as well as a number of taxi operations.

Veolia Transportation is part of Veolia Transport, the world's largest private operator of public transit, which operates contracts for 5,000 transit authorities in 30 countries, and has over 100 years of operating experience. The company operates some of the most complex and sophisticated networks in the world, including Stockholm, Melbourne, Bordeaux, Rouen, and Dublin.
